

# Weekly Grow Checklist

A printable routine so nothing slips between feedings

## Every day

---

- ☐ Check reservoir water level or soil moisture
- ☐ Visually inspect leaves for pests, discoloration, or wilting
- ☐ Confirm lights and timers are running on schedule
- ☐ Confirm air pump / water pump is running (hydro setups)

## Every 2–3 days

---

- ☐ Check and adjust pH to target range
- ☐ Check EC/PPM and top up nutrients as needed
- ☐ Check reservoir temperature — keep under 68°F (20°C) in hydro

## Weekly

---

- ☐ Full reservoir change (hydro) or thorough watering with fresh pH'd nutrient solution (soil)
- ☐ Clean pH/EC meter probes per manufacturer instructions
- ☐ Wipe down grow light and check fans/filters for dust buildup
- ☐ Check and adjust light height as plants grow
- ☐ Log notes: height, new growth, and anything unusual
- ☐ Prune or train as appropriate for the current stage (LST, defoliation)

## As needed

---

- ☐ Flush with plain pH'd water for the last 1–2 weeks before harvest
- ☐ Rinse or replace carbon filter media
- ☐ Re-calibrate pH/EC meters every few weeks per manufacturer instructions
